The RCE and IDS received 6/7/06 have been entered and claims 1, 3, 6, 12-20 are currently pending in this application.

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1, 3, 6, 12-20 are rejected under 35 U.S.C. 102(b) as being anticipated by Davidson.

Davidson (Circulation) entitled “N-Terminal Proatrial Natriuretic Peptide and Brain Natriuretic Peptide are Stable for Up to 6 Hours in Whole Blood In Vitro” teaches in column 2, blood samples were taken into standard polypropylene tubes not containing aprotinin and tested for stability of BNP. There were no significant differences in BNP values from blood that had been stored at room temperature for up to 6 hours. The addition of aprotinin as a preservative did not significantly affect peptide levels.

Regarding the claimed stability in claim 1 of the residual immunoreactivity is 50% or more after 24 hours standing at 25 degrees C., this feature would be inherent in the method taught by Davidson where the same peptide is measured for stability in the same container without aprotinin as claimed.

All the features of the claims are taught by Davidson for the same function as claimed.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Nelesen (Circulation) teaches degradation of ANP in tubes other than polypropylene stored at cold temperatures.
